

Clearview Support Stand

Tired of having your drain tube knocked over, and bait clogging your drains? This stand, used with the Clearview Baitwell Filter, offers stability for your drain tube. It is ideal for fishermen who place their catch in bait or live wells.

First, make sure you have the Clearview Baitwell Filter sized properly for your drain tube.

1. Center the large hole of the stand around your drain tube in the floor of your bait well.
2. Press down to affix the suction cups. It helps to first moisten the cups.
3. Place your Clearview Baitwell Filter over your drain tube and into the stand's hole.
4. Tighten down the thumb set screw on the Clearview to secure the Clearview Filter to the drain tube.
5. When you need to drain the bait well, remove the Clearview Filter and drain tube. The stand can stay in place.
